$e^+e^- \to p\bar{p}\gamma$
At least one photon satisfies:
$25^\circ < \theta_\gamma < 155^\circ$
$E_\gamma > 4GeV$
$30^\circ < \theta_{p,\bar{p}} < 150^\circ$
$\sqrt{s} = 10.52GeV$
$\frac{d\sigma^{LO}}{dQ^2} / \frac{d\sigma^{NLO}}{dQ^2} - 1$
Q^2 (GeV^2)
