$e^+e^- \to p\bar{p}\gamma$
$\sqrt{s} = 10.52GeV$
$0^\circ < \theta_{p,\bar{p}} < 180^\circ$
$5^\circ < \theta_\gamma < 175^\circ$
$30^\circ < \theta_{p,\bar{p}} < 150^\circ$
At least one photon satisfies:
$25^\circ < \theta_\gamma < 155^\circ$
$E_\gamma > 4GeV$
$\frac{d\sigma}{dQ^2}(nb/GeV^2)$
Q^2 (GeV^2)
